Although the water pump is driven by a multi V-belt, rather than the timing belt, in this engine the pump is mounted behind the timing belt drive, and the timing belt idler is attached to the water pump. Should the water pump fail later, the entire process has to be repeated using new parts since Ford has forbidden the continued use of used timing belts in this case.

The focus's arent common for fuel problems but worth taking the fuel rail out and cranking the engine and seeing that all the injectors are firing sufficiently. I have had this problem with a few Fords and especially my own Ford Focus, I changed the plugs, coil pack etc etc, It was still the same, so i greased the plug leads where they connect to the plug and it seems to be running excellent!!!

Next to this Ford also had a pretty large (mixed) engine stock which contained engines with the old chain as well as engines with the new wetbelt. Identifying whether the car has a chain or a wetbelt is only possible visually after the timing cover has been removed. I have seen that some 2009 vehicles still had the timing chain while others of the same production date did have the wetbelt.
